Repository and Profiles

- GitHub Repositories - <https://github.com/danielpruitt>
- Personal Portfolio - <https://danielpruitt.github.io/Portfolio>
- LinkedIn - <https://www.linkedin.com/in/daniel-pruitt>

Projects

- Moodify - <https://danielpruitt.github.io/Moodify/>
 - Moodify is a project that highlights the user of a CSS library, the Imgur, Kairos, and Spotify API. The web app takes the user input from a search query or picture to return playlists based off their mood.
- GiphyApi - <https://danielpruitt.github.io/GiphyApi/>
 - The GiphyApi page uses an input to search for the .gif files related to movies. This assignment highlights the use of AJAX calls, jQuery, and Materialize.
- Liri-Node-App - <https://danielpruitt.github.io/liri-node-app>
 - Liri Node App is a CLI application that was built to demonstrate the usage of Node and different node packages. A link in the readme has a link to the demonstration of Liri.
- Train Schedule - <https://danielpruitt.github.io/TrainSchedule/>
 - This train scheduling web application utilizes Google Firebase to log new entries which automatically updates the database and prints to the current page and other pages that are opened to the webpage.
